

Ader, J., Madden, K., Felten, D., Bellinger, D.L., & Schiffer, R.B. (1996). Psychoneuro-immune interactions between the brain and the immune system. In B.S.

Social Support, Physiological Processes,

association between social support and immunity would be important because the immune system is responsible for the body's defense against infection and

these factors could not account for the association between social support and physiological functioning.

Note
